

Dear Sir,

It was a pleasure being a part of the meeting to prepare response to various newspaper reports maligning "Trenchless Technology". We have discussed most of the points and look forward to the subject minutes of meeting. On a second thought, you may find the point below relevant to the reply...

" The subsurface utility plan is not clear, resulting in various agencies installing products on the same "Right of Way", resulting in collateral damages, proper utilization of subsurface investigation will help in resolving these conflicts."

Regards

Ehteshamul Haque
